SUMMARY

Frontend-focused full-stack developer with 2+ years of full-time experience building TypeScript, React and Next.js interfaces for production client products in the US, including a restaurant waitlist platform, a social-impact dining app and a childcare marketplace. MS in Information Technology student at Arizona State University (graduating December 2026, GPA 3.78/4.0), who has also built Python/FastAPI backends, an XGBoost risk-prediction model and end-to-end AWS data pipelines. Seeking full-time Frontend or Full-Stack Software Engineer roles.

PROFESSIONAL EXPERIENCE

Ordex Technology Solutions LLP — Software Developer (Frontend), Full-time · Ahmedabad, India *Aug 2022 – Dec 2024*

Hired full-time in the third year of my B.Tech after interviewing for an internship; worked full-time while completing the degree.

- Developed and maintained React and Next.js frontends for 10+ client products across hospitality, lifestyle, education, ERP and real estate, for clients in the US and India.
- **Kyobee** (restaurant waitlist platform): created the guest self check-in screen and live wait-status view showing parties ahead and estimated wait time, so guests could track their place in line without asking staff.
- **GiftAMeal** (social-impact dining app, St. Louis, Chicago and Detroit): implemented the web app's photo-upload flow that triggers a meal donation to a local food bank, for a platform that has funded over 92,000 meals.
- **BabySitter** (US childcare marketplace, MERN stack): developed the 'Find a Babysitter' search and the 'Register to Be a Babysitter' onboarding flow as responsive React interfaces.
- Integrated frontends with REST APIs, working with backend developers to define request and response formats and handle loading, error and edge cases.
- Shipped features in agile sprints with Git-based code review, testing and production releases.

TECHNICAL PROJECTS

RLVR Environment — Verifiable Rewards for ML Tasks — Python, Gymnasium, pytest · GitHub Nov 2026

Built a Gymnasium-style RL environment with 20 code and math tasks where the reward comes only from an automated verifier — hidden unit tests for code tasks, exact answers for math. github.com/nehilbhakta/rlvr-env

7 pytest tests pass; the oracle (reference solutions) scores 20/20 while a heuristic baseline scores 2/20, showing the verifiers — not the model — decide the reward.

Supply Chain KPI Dashboard — Python, pandas, Tableau · GitHub Nov 2026

Built a KPI dashboard on simulated procurement data (732 purchase orders, $13.77M spend, May–Oct 2026) with on-time delivery, stockout risk, excess inventory and price-variance views. github.com/nehilbhakta/supply-chain-kpi

Network on-time delivery is 90.2%; the worst supplier, Desert Freight Logistics, is 69.1%, with 9 stockout-risk SKUs and $586,612 excess inventory, documented in a supplier scorecard and data dictionary.

TaskBoard — Full-Stack Task Board — FastAPI, SQLAlchemy, Next.js 15, React 19, TypeScript · GitHub Nov 2026

Built a Trello-style task board end to end: FastAPI + SQLAlchemy backend with boards, lists and cards, and a Next.js frontend with drag-and-drop, card priority, due dates and labels, and search and filtering. github.com/nehilbhakta/task-board

Designed a gapless card-move API that renumbers both lists on every drag, with SQLite by default and PostgreSQL via a single environment variable; seeded demo board ships with 4 lists and 7 cards, and 4 backend tests pass.

Restaurant Reservation API — Python, FastAPI, SQLAlchemy, SQLite · GitHub *Mar 2026*

- Created a REST API to book, view, update and cancel reservations, with booked, checked-in and cancelled statuses.
- Designed a normalized relational schema with SQLAlchemy and validated requests and responses with Pydantic.
- Organized the code in layers (models, schemas, CRUD, routes) and documented every endpoint with auto-generated OpenAPI/Swagger docs.

Heart Attack Risk Prediction & Alert Pipeline — AWS S3, EMR/Spark, SageMaker, Lambda, SNS, Athena *Apr 2026*

- Built an end-to-end event-driven pipeline on six AWS services that ingests simulated patient vitals, predicts risk and emails providers when a patient is high-risk.
- Wrote a Spark job on EMR to aggregate 7 days of vitals per patient and join them with historical records, dropping old labels to prevent leakage.
- Trained and deployed an XGBoost model as a SageMaker endpoint, invoked by Lambda with a saved feature order so training and prediction stay consistent.

Rebuilt the pipeline as a free local full-stack app (Nov 2026): XGBoost trained on the UCI Cleveland heart-disease dataset (303 rows) with test ROC-AUC 0.957, served by FastAPI with a Next.js dashboard for 20 simulated patients, 7-day vitals and high-risk alerts. github.com/nehilbhakta/heart-attack-risk-prediction

E-Commerce Sales Dashboard — Tableau · Live dashboard *Fall 2025*

- Cleaned and prepared an order-level sales dataset (date parsing, missing values, label standardization, outlier capping) for a team of four.
- Designed an interactive dashboard of 9 coordinated views with shared filters for category, fulfillment, state, date range and B2B/B2C, and published it to Tableau Public.

TECHNICAL SKILLS

- **Frontend:** React, Next.js, TypeScript, JavaScript (ES6+), HTML5, CSS3, responsive design, REST API integration
- **Backend:** Node.js, Express, Python, FastAPI, SQLAlchemy, RESTful API design
- **Databases:** MongoDB, PostgreSQL, MySQL, SQLite
- **Cloud:** AWS (S3, EMR, Spark, SageMaker, Lambda, SNS, Athena, Glue, Redshift, IAM), Tableau
- **Tools:** Git, GitHub, Docker, Linux, Vercel, Figma, Agile/Scrum

EDUCATION

Arizona State University, Tempe, AZ — MS, Information Technology (Project Management) · GPA: 3.78/4.0 *Jan 2025 – Dec 2026*

Silver Oak University, Gujarat, India — B.Tech, Information Technology · CGPA: 9.5/10 *Aug 2020 – May 2024*

CERTIFICATIONS

- AWS Academy Graduate – Data Engineering (course badge, score 100%) · Feb 2026
