SUMMARY

Software developer with 2+ years of professional experience shipping production web applications, now focused on machine learning. Built an RL environment with verifiable rewards for evaluating LLM agents and end-to-end ML pipelines in Python, scikit-learn, and XGBoost. MS in Information Technology, Arizona State University (Dec 2026, GPA 3.78/4.0). Seeking new-graduate ML engineering roles.

TECHNICAL SKILLS

Languages & Frameworks: TypeScript, JavaScript (ES6+), Python, scikit-learn, React, Next.js, Node.js, Express, FastAPI, HTML5, CSS3, RESTful API Design
Data & Databases: SQLAlchemy, PostgreSQL, MySQL, MongoDB, SQLite, Pandas, Tableau, Data Visualization
Cloud & Tools: AWS (S3, EMR, Spark, SageMaker, Lambda, SNS, Athena, Glue, Redshift, IAM), Docker, Git, GitHub, Vercel, Figma, Agile/Scrum, Responsive Design

PROFESSIONAL EXPERIENCE

Ordex Technology Solutions — Software Developer (Frontend) · Ahmedabad, India (HQ: Cerritos, CA) Aug 2022 – Dec 2024

- Hired full-time in my third year of B.Tech; worked full-time while completing the degree.
- Developed and maintained React/Next.js frontends for 10+ client products (hospitality, lifestyle, education, ERP, real estate) for US and India clients; integrated REST APIs; cut page load from 3.2s to 1.8s and raised Lighthouse scores from the mid-60s to ~90 with code splitting and lazy loading.
- Kyobee (now RetailBoon, Ordex's own waitlist platform): built the guest self check-in screen and live wait-status view showing parties ahead and estimated wait time, with 15+ reusable React components that cut new-screen development time by ~25%.
- GiftAMeal (social-impact dining app): implemented the photo-upload flow that triggers a meal donation; the platform has since grown to 1,200+ restaurants across 46 states and over 3 million meals funded.
- BabySitter (US childcare marketplace, MERN stack): developed the “Find a Babysitter” search and “Register to Be a Babysitter” onboarding flows as responsive React interfaces.

TECHNICAL PROJECTS

RLVR Environment — Reinforcement Learning with Verifiable Rewards · GitHub **Nov 2026**

- Built a Gymnasium-style reinforcement learning environment with 20 tasks (10 code tasks verified by hidden unit tests, 10 math tasks by exact answers) where reward comes only from the verifier — never from a model judging itself.
- Verified with 7 pytest tests; oracle solves 20/20 tasks while a rule-based heuristic baseline solves 2/20.

TaskBoard — Full-Stack Task Board · GitHub **Nov 2026**

- Built a Trello-style task board end to end: FastAPI + SQLAlchemy backend with boards, lists and cards, and a Next.js 15 / React 19 frontend with drag-and-drop, card priority, due dates, labels, search and filtering.
- Designed a gapless card-move API that renumbers both lists on every drag; SQLite by default, PostgreSQL via one environment variable; 4 backend tests pass.

Heart Attack Risk Prediction & Alert Pipeline · GitHub **Apr 2026**

- Built an event-driven pipeline on AWS that ingests simulated patient vitals, predicts risk and emails providers on high risk; Spark job on EMR aggregates 7 days of vitals and drops old labels to prevent leakage; XGBoost served as a SageMaker endpoint via Lambda.
- Rebuilt as a local full-stack app (Nov 2026): XGBoost on UCI Cleveland (303 rows), test ROC-AUC 0.957, FastAPI + Next.js dashboard for 20 simulated patients and high-risk alerts.

EDUCATION

Arizona State University — MS, Information Technology · GPA: 3.78/4.0 **Jan 2025 – Dec 2026**
Silver Oak University, Gujarat, India — B.Tech, Information Technology · CGPA: 9.5/10 **Aug 2020 – May 2024**

CERTIFICATIONS

- AWS Academy Graduate – Data Engineering (course badge, score 100%) · Feb 2026
